

TW5: Data Preprocessing

Names: Alfin Abraham, Karthik Nalla

GitHub: [\(Alfin\) TW5 GitHub link](#), [\(Karthik\) TW5 GitHub link](#)

Summary:

We gained an understanding of the significance of data preprocessing in data science methodology after completing TW5. We discovered that dealing with missing data and invalid values is essential. The assignment has clarified the meaning of the Data Science methodology phrase "garbage in, garbage out." We also discovered that any machine learning algorithm we use will perform best if the dataset provided is of high quality.
